

Step 1:

Select folder you wish to clone repo to.

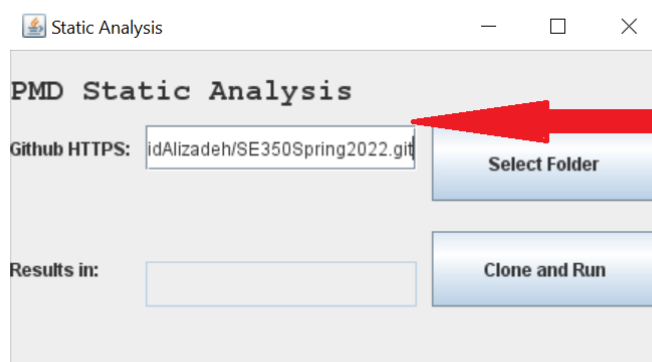

Step 2:

When folder button is clicked file explorer GUI will open. There you must pick folder you wish to clone the repo to.

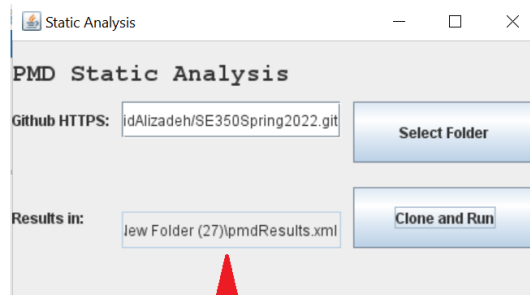

Note: It is recommended that you create a new folder. To do this, simply right click as you would on windows file explorer and click "New Folder". Don't forget to select your newly created folder

Step 3:

Paste HTTP link to the textbox as directed.

Step 4:

Click clone and Run to get results.

After you click clone and run, you will be given a directory of the PMD results stored as XML file. You can copy and paste full directory to find it in your files or you can simply go to directory that you cloned the repo to. XML file will always be in the file folder you cloned your github project to.

Note: An invalid link will simply return "invalid link" in the bottom textbox
